C&G SYSTEMS INC.

The Certification of SOLIDWORKS Gold Product

~ SOLIDWORKS' Partner CAM Product: "CG CAM-TOOL for SOLIDWORKS" ~

In November 2014, C&G SYSTEMS INC. (headquartered at: Shinagawa-ward, Tokyo; the president: Mr. Seiichi Shiota) received "Gold Product" certification. This is the final level of conformity in the certification program sponsored by Dassault Systèmes SOLIDWORKS.

The product receiving Gold Product Certification is "CG CAM-TOOL for SOLIDWORKS", a "CAM" software for machining molds, dies and parts. CG CAM-TOOL functions totally as an Add-In inside of "SOLIDWORKS" the 3D CAD software developed by Dassault Systèmes. CG CAM-TOOL is acknowledged as a CAM product that is fully integrated with SOLIDWORKS.

Receiving said program's certification proves the software's higher level of affinity with SOLIDWORKS, and further enhances the recognition from worldwide SOLIDWORKS users and resellers, as a tightly integrated CAM software, functioning inside of SOLIDWORKS. Our partnership with Dassault Systèmes, at the technical level, has been strengthened as well. This will greatly contribute, to the swiftness of the development of the functions, and the upgrading of the products in the future.

"CG CAM-TOOL for SOLIDWORKS" was released in the spring of 2011 as a CAM module for the "CG Series", the 3D CAD/CAM system for molds and dies. Our company had integrated the longtime accumulated possessed technologies of "Mold Designing CAD" and "High Precision CAM"; and, ever since, we have been promoting its further functional enhancement.

Also, our 3D CAD for press die design, "CG Press Design for SOLIDWORKS", a part of the "CG Series", was awarded a "Gold Product" certification in February 2014. A third "CG Series" product for CAD mold designing, "CG Mold Design for SOLIDWORKS", is currently under examination for the prestigious "Gold Product" award.

In Japan, potential and existing users of our CAD/CAM systems are requesting, a software that can allow young technicians to become CAD/CAM operators in a very short time. Similarly our overseas customers are also wanting, a system that does not waste much time in operator education or require much expertise. To accommodate such needs, we have developed “CG Series”, focusing on “ensuring high quality products, with quick response/results, and with simple operation”. Currently, we are promoting business expansion into overseas local markets by establishing a business partnership with overseas local agencies in Taiwan, China, and the ASEAN nations and others. This will allow us to support their business and technical requirements, during start-up and going forward.

[CG CAM-TOOL for SOLIDWORKS]

Equipped with our CAM engine, known for outstanding surface finish results, CG CAM-TOOL is in a thoroughly slimmed down operational environment, working seamlessly inside of SOLIDWORKS. This software creates high precision and highly efficient tool paths. In addition, “CG CAM-TOOL for SOLIDWORKS”, works closely with the mold/die design created by “CG Press Design for SOLIDWORKS” or “CG Mold Design for SOLIDWORKS”. This product coordination greatly shortens the machining definition time by automatically generating various NC data, such as drilling, pocket machining, wire electric discharge machining, and so forth.
