C&G SYSTEMS INC.

Newly Developed Mass Production Control System for Small-to-Medium-sized Manufacturing

~AIQ Process Control System Equipped with New Module~

In September, our company (President Shoichi Shiota) will release “V15.2” (this version), the latest version of AIQ, the process control system for manufacturing.

In this version, based on the material control information accumulated by system operations, we have newly equipped an expansion module “Mass Production Control Option” that supports the mass production plan of manufacturing. In this module, you can calculate both the best amount of ordering materials and the best time of ordering for production from the products’ process information, production lot information, receiving and shipping information and material information (materials, in-process products, finished products). Also, you can use your on-site terminals such as computers or mobile phones to register and confirm the shipment of products, the receipt of materials and the result of actual production. Furthermore, you can improve the traceability of products at the production stage, which is indispensable to control quality, by identifying “production lot” and “material lot” from the information of the barcodes of lot cards issued at the time of shipping.

This module realizes the proper material procurement based on production plans, reducing “Pressure of Material Cost” and “Opportunity Loss of Order Receipt” and contributing to quality improvement.

This module fits the mass production of food and daily commodities as well as of industrial products such as metal and plastic, and can be customized according to the needs of each business.

[Product Prices] (All prices below are in Japanese Yen.)

AIQ Base Module + Mass Production Control Option : ¥ 4,000,000 –

* Prices are subject to change depending on the server/client constructions.

Annual maintenance fees are not included.

[Sales Target]

20 licenses (per year)

[Company Information]

- Foundation : July 2, 2007 (*1)
- Capital : ¥500,000,000-
- Description of Business : Development/Sales/Support of CAD/CAM System for Mold & Die, and Production Management Systems

(*1) Our company is a CAD/CAM solution developer founded in 2010 as the result of a business integration and merger with Computer Engineering (founded in 1978) and Graphic Products (founded in 1981).

Note: All company and product names in this release are trademarks or registered trademarks of their respective companies.
